

Gyford StandOff Systems® Among Top 50 Requested Architectural Products of 2010

November 2010, Architectural Products Magazine announces their readers "most requested products of the year". The Gyford StandOff Systems® ad which ran in the July issue of Architectural Products generated enough inquiries from readers to qualify to be among their top 50 products in 2010.

The ad featured the new 1/4" diameter StandOff Cap and Barrel. The New mini-standoffs are the smallest standoff part in the market today. The 5/32" high cap is low-profile in design and can be used along with the 3/16" high Barrel to create layers and depth.

This impressive little part is the perfect enhancement to ADA Signage, Recognition Plaques, Door Signs and much more. Create big impact with your small signage or mounting applications using this quality crafted component.
