## Zip-Toggle Anchors

(1) Pre-drill wallboard or hollow wall with a 1/2" bit.

(2) Push the metal wing end of the Zip-Toggle through the hole as shown. When the wing flips back into the open position, push the lock ring (A) up as tight as possible against the wall while pulling the tab (B) straight away from the wall. Once the assembly is tight on the wall, pull the loop apart, and bend the zippers to the wall to break them off. Anchor type may vary but will install similar to diagram.

(3) Thread the appropriate hardware into anchor insuring it threads through the wing portion of the anchor. Attach your **Gyford StandOff Systems®** parts for your application.

NOTE: *For part numbers HD-ZTA, HD-ZTM, HD-ZTOG1, HD-ZTOG2*
